

Certified Copeland® Remanufactured Compressors

The replacement compressor quoted herein is a Certified Copeland remanufactured compressor. Only compressors remanufactured by Emerson Climate Technologies, Inc. can bear the name **Copelametic®** and the **Certified Copeland® Remanufactured** seal on the package or nameplate.

All Certified Copeland remanufactured compressors are completely disassembled, re-qualified and updated to current specifications. Certified Copeland remanufactured compressors incorporate materials, motor protective devices and other components that match what is currently used in the production of new Copeland® compressors.

Only Emerson uses all genuine Copeland parts that meet the same standards as current new manufactured semi-hermetic compressors. These include design and performance improvements, regulatory changes in refrigerants, safety modifications and standards of dimensional tolerances and quality.

Certified Copeland remanufactured compressors carry the Underwriters Laboratories® Seal. This mark says that Certified Copeland remanufactured compressors meet the same standards as our new manufactured compressors.

Certified Copeland remanufactured is your assurance that these compressors meet standards of efficiency, reliability and safety. No other compressor remanufacturer can claim to be equal to or meet the standards of a Certified Copeland remanufactured compressor.
